

# Resetting Forms

## Section 11, Lecture 125

RC5 introduced a new feature, which allows forms to be reset.

It's as easy as calling `form.reset()` .

Example:

```
1. @Component({
2.   selector: 'my-comp',
3.   template: '
4.     <div [formGroup]="form">
5.       <input formControlName="first">
6.       <input formControlName="last">
7.     </div>
8.   '
9. })
10. class MyComp {
11.   form = new FormGroup({
12.     first: new FormControl('Nancy'),
13.     last: new FormControl('Drew')
14.   });
15. }
16.
17. reset() {
18.   this.form.reset(); // will reset to null
19.   // this.form.reset({first: 'Nancy', last: 'Drew'}); -- will reset to value specified
20. }
```
